CASE SCENARIO

Hello, Sales Team?

Hello, what can we assist you?

I have a project. To build a machine that I need a motor to rotate the ball screw to lift the workpiece or move the workpiece, I don't know if Oriental Motor has any product can recommend me?

We recommend **EZS Series** and **EAC Series** Linear Actuators that are our highlighted product which is lower cost and shorter lead time.

How about the length of the ball screw or stroke?

We have a model that meets the needs. Also we have with electromagnetic brakes. Electromagnetic brake, which is a protection to prevent the workpiece falling while the power is off in case the customer applies it in the up-down line.

For example EZS4 strokes 50-700 mm. And can lift loads of 7-14 kg.
For example EZS6 strokes 50-850 mm. And can lift loads up to 15-30 kg.

And what about the control? Are they the same or different type?

Our products support a wide variety of control systems in all areas, be it PLC or Network.

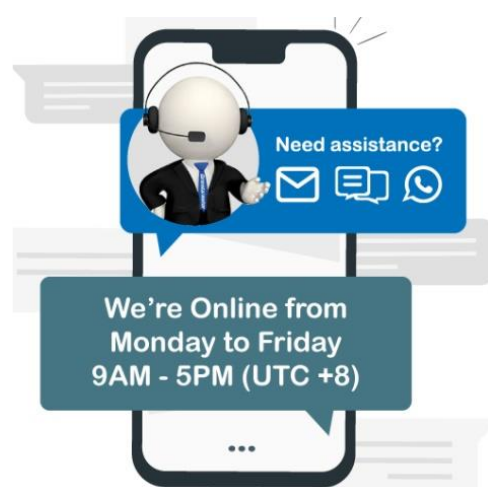

In addition, we also have a free motor selection service by engineers or you can download the motor selection software through our website via www.orientalmotor.com.sg

Great! Please help calculate for the application.

Sure! Do provide us more information about interference and is designed to be used in calculations to choose the right model for you.

Alright will send you soon.
