Toa Payoh Safra

4th October 2013
 Morning Session (9am – 12pm)
 Afternoon Session (1pm-4pm)

Choose either one session

Register Now! Seats are limited!

Lesson 3

Technical Information

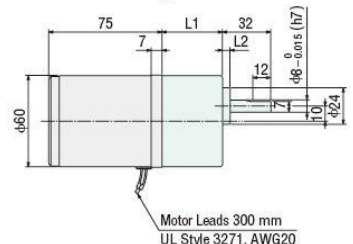

What is the differences between Constant Speed Motor and Speed Control Motor?

For constant speed motor, you would need to use power supply and capacitor to let the motor run. However, for a speed control motor, you would need to use a speed controller (MSC-1) to control the speed. The speed control motor had a tacogenerator at the back of the motor. The following will be the 2D model of the motors.

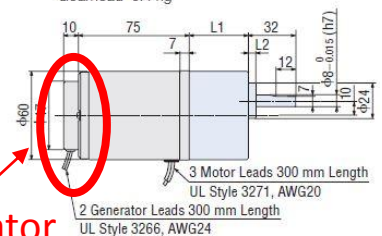

6 W

Mass: Motor 0.7 kg
 Gearhead 0.4 kg

Constant Speed Motor (AWK Series)

Mass: Motor 0.8 kg
 Gearhead 0.4 kg

Tacogenerator

Speed Control Motor (AWK Series + MSC-1)
